"Food Will Win the War and Write the Peace"

PLAN NOW for a VICTORY GARDEN in 1943

Agriculture faces the most important year in its history. American planters must produce more and more "Food for Freedom." It's **All Out** production for **VICTORY** now.

It's a **patriotic duty** to plan carefully for maximum production of the crops our Government and Allies need.

Plan your **Victory garden** carefully. Decide what vegetables are best for you to grow, turn to the following pages and select the varieties you want. Our catalogue is written with clear and accurate descriptions so it will be easy for you to pick out the kinds which are best suited to your needs.

We offer only one word of advice. Purchase clean, pure seeds and order them early. Some seeds are exceptionally short, and later on may be actually unobtainable.

Our sincere thanks to all of our old friends for past patronage, and a warm welcome to our new ones.

ALNEER BROS.

FREE SEED with Every Order

We give new varieties of Flower and Vegetable Seed with every order you send us for Seeds.

Horse Radish Roots

Horse Radish is grown from sets or pieces of the root. Set the piece-root vertically, small end down, and the large end one to three inches below the surface of the ground. Cultivate until tops cover the ground, when their shade will keep down the weeds.

Bohemian or Maliner Kren

is an improved, large-rooted variety of excellent quality. Sets for planting: Doz. 45c, 100 for \$2.50 postpaid; not prepaid 1000, \$11.50.

Culture: Sow seed in early spring in rows 1½ to 2 ft. apart, spacing the seed 1 in. apart in the row, and firmly cover with 2 in. of fine soil. Keep free from weeds at all times. A packet will produce about 200 roots; ounce, 75¢; 4 to 5 lbs. to sow an acre.

When roots are one to two years old, transplant them 18 to 24 in. apart in rows 2½ ft. apart for garden cultivation, 4 to 6 ft. apart for field culture; 5,000 to 7,000 roots to plant an acre.

EDIBLE SOY BEAN

BANSEI (90 days.) In recent years many varieties of edible Soy Beans have been imported from the Orient by the Department of Agriculture, and detailed study on their adaptation and also market and growing conditions have been made. As a result of these tests, several promising varieties have been obtained, and the one which seems the most suitable for the north is Bansei. Bansei has a plant that is erect and of medium height, very prolific, well adapted to a short growing season. The beans when ripe are glossy yellow, elliptical of mild and pleasing flavor. All Soy Beans of the edible variety are green when in the growing condition. They are highly resistant to disease and insect pests. Eating qualities are excellent when cooked to serve similar to Lima Beans. Roasted Soy Beans are very good and these are prepared by soaking the dried beans overnight, boil for one hour in salted water. Spread in shallow pan and roast in moderate oven, 350 degrees Fahrenheit, until brown. Sprinkle with salt while still warm. Pkt. 10c, ½ lb. 25c, 1 lb. 45c, 2 lbs. 85c, prepaid.

Celtuce

Celtuce belongs to the lettuce family but is entirely different in its growth and uses. The young leaves may be eaten as a salad, but its chief value is its central stem or stalk.

Whether Celtuce stalks are to be eaten raw or cooked, you must first remove all the outer skin and fibrous layers down to where they become light green and tender. As a raw vegetable, cut the stalks into 4- or 5-inch lengths and split lengthwise; chill and eat as you would celery or carrots, with salt or mayonnaise.

Cooked Celtuce stalks are pale green, attractive in appearance, and have a pleasing, mild flavor suggestive of celery, lettuce, asparagus, broccoli, zucchini and summer squash.

Celtuce is easy to grow. Plants grow quickly, forming a rosette of light green leaves which may be used, when young, as "greens." In less than 90 days after seed is sown, the central stem or stalk is usable and will be found most tender at this age. The stalks are solid throughout, the skin greenish white and tough but the inside is very succulent, most delicate pale green, crisp and brittle. Make first sowing of seed as soon as ground can be worked in the spring. Succession sowings at intervals of a week or ten days will give a continuous supply. Pkt. 15c, ½ oz. 65c, oz. \$1.25.

If you have trouble growing cabbages owing to yellows disease in your locality, try seed of the resistant varieties described below.

Marion Market

Marion Market Yellows-resistant. This Cabbage resembles Copenhagen Market but matures a few days later and makes a much larger plant. Its most distinguishing feature is its complete resistance to Cabbage yellows and it is, therefore, valuable for land where "yellows-resistant" Cabbage is needed. The heads are almost round and very solid. It is a hardy, highly bred strain, grown exclusively for kraut and long-distance shipping. It has produced as much as 26 tons per acre. Pkt. 15c, oz. 50c, 1/4 lb. \$1.35, 1/2 lb. \$2.40, lb. \$4.50.

Yellows-Resistant — Golden Acre (Wisconsin Detroit)

New "yellows-resistant" Golden Acre. Medium size, solid, round heads about 6 in. across; two weeks earlier than Marion Market. Plants are short-stemmed, of erect uniform growth, and have grayish green leaves. Pkt. 15c, oz. 50c, 1/4 lb. \$1.35, 1/2 lb. \$2.40, lb. \$4.50.

Wis. Golden Acre

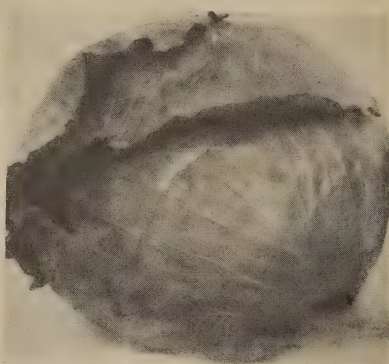

Wis. All Seasons

Yellows-Resistant Improved All-head Select

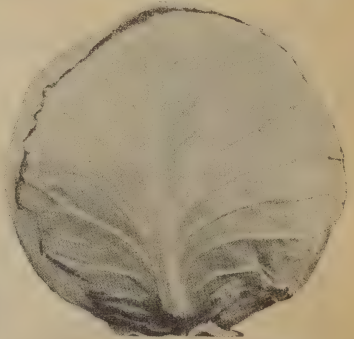

Heads are of a flattened shape, carried on short stout stems. The core is decidedly small. It is the earliest of the "yellows-resistant" large flat-headed Cabbages of the Allhead type. Stands long without bursting. Pkt. 15c, oz. 45c, 1/4 lb. \$1.20, 1/2 lb. \$2.10, lb. \$4.00.

Wis. Ballhead

Wisconsin Ballhead. (Yellows-Resistant.) (105 days.)

This new strain of Yellows-Resistant Cabbage was developed in answer to a demand for a late storage variety that would mature earlier and not as coarse as Wis. Hollander No. 8. After years of careful breeding this new strain was originated and in trials it has proven 100% resistant to Yellows, which is not true of No. 8. It is also more uniform and in fact more uniform than any of its type ever seen and is somewhat earlier than the No. 8. It was not bred from Wis. No. 8 but from an entirely new strain of cabbage. For market gardening, shipping and storage purposes it is second to none. Pkt. 15c, oz. 45c, 1/4 lb. \$1.35, 1/2 lb. \$2.10, lb. \$4.00, postpaid.

Wisconsin Globe, Yellows-Resistant

Wisconsin Globe

A wonderful "Yellows-Resistant" second early cabbage. It has short stems, round heads and is a very vigorous grower. A sure header and of excellent quality. A good yielder on any fair soil. This cabbage is a selection from Glory of Enkhuizen and is the same in season as that variety. Pkt. 15c, oz. 45c, 1/4 lb. \$1.20, 1/2 lb. \$2.10, lb. \$4.00, postpaid.

Disease Resistant Wisconsin No. 8 Hollander

Disease Resistant Wisconsin No. 8 Hollander

A "yellows"-resistant strain of cabbage developed out of our stock of Hollander under the direction of Dr. L. R. Jones of the University of Wisconsin. At Racine, Wisconsin, where for several years many of the commercial crops of cabbage were badly infected or entirely destroyed by the disease called the yellows, this strain has proven to be practically immune from attack. Pkt. 15c, oz. 45c, 1/4 lb. \$1.35, 1/2 lb. \$2.10, lb. \$4.00.

The plants are short stemmed; light green colored leaves. It is a vigorous grower and yielder. Pkt. 10c, oz. 40c, $\frac{1}{4}$ lb. \$1.10, $\frac{1}{2}$ lb. \$2.00, lb. \$3.75.

Sow as early in the spring as the ground can be prepared, in drills 15 inches apart; cover the seeds about one-half inch deep, and thin to from 3 to 5 inches in the row. In field culture when grown for horses and cattle, the rows should be two feet apart, so that the crop can be worked with horse and cultivator.

It is of most delicious quality, and, owing to the fine texture of the red flesh and its tender, delicate flavor, is called the sweetest of all Carrots by all who have tasted same. Matures about two weeks ahead of all other half long sorts, and equally as productive. Measures 6 to 7 inches in length. Celery
Golden Self-Blanching

Celery
Golden Plume

Alneer's Earliest Sure-Head Snowball Cauliflower

CELERY

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Plants will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or Celery paper may be used to blanch the stalks. One oz. of seed is sufficient for 600 ft. of row. One oz. sown in the seed-flat gives 8,000 to 10,000 good strong plants; 2 ozs. are needed for planting one acre.

Golden Plume The plants are of strong growth and produce thick and heavy stalks with a well-blanching solid heart. It is considered by many gardeners the best early Celery. Early and quite resistant to blight and rot. A very desirable variety with good storing qualities; of excellent crisp and nutty flavor. Pkt. 10c, oz. 40c, ¼ lb. \$1.00, ½ lb. \$2.85, lb. \$5.50.

Golden Self-Blanching (True Paris Golden) Grows to a very large size and is very stocky and robust. The stalks grow vigorously, with large ribs thickly and closely set. Flavor fine and sweet. Pkt. 10c, oz. 40c, ¼ lb. \$1.50, ½ lb. \$2.85, lb. \$5.50.

Silver Self-Blanching (Snow White) This new celery is described as being a Golden Self-Blanching with white plume coloring, possessing the robust, sturdy, compact habit of Golden Self-Blanching, the stalks being even thicker, more solid and heavy with immense solid heart, brittle, crisp and tender, of delightful rich flavor. Color is beautiful silver white. Pkt. 10c, oz. 35c, ¼ lb. \$1.25, ½ lb. \$2.25, lb. \$4.00.

Henderson's White Plume The White Plume is naturally white, so that by drawing the earth up against the plant and pressing it together with the hands and again drawing up the soil that has been squeezed against the celery in its place, the work of bleaching is completed. The earliest celery in cultivation. Pkt. 10c, oz. 35c, ¼ lb. \$1.25, ½ lb. \$2.25, lb. \$4.00.

Giant Pascal A desirable, long-keeping, green winter Celery; robust, healthy stock about 2 feet high, making broad, thick, stringless stalks and large hearts. Golden Cross Bantam**Wilt Resistant—High Yield—Uniform**

We recommend this new hybrid sweet corn for places where Stewart's disease (wilt) makes it impossible to grow ordinary varieties of sweet corn. This corn which is the product of crossing two pure lines is not only resistant to bacterial wilt (Stewart's disease) but produces larger crops of beautiful ears. The ears have 10 to 14 rows of golden yellow kernels, uniform in length (about 8 in.) and of excellent quality. Matures a week later than Golden Bantam, the whole crop ripening at about the same time.

This crossed seed was produced by the controlled pollination of two inbred parents and will produce the true Golden Cross Bantam. Seed from the crop cannot be saved as it will break down. The cross has to be made each year. Pkt. 15c, ½ lb. 30c, lb. 50c, 2 lbs. 90c, 5 lbs. \$2.00, postpaid.

**Golden Cross Bantam****SWEET CORN**

Corn does best in moderately rich soil; do not plant before settled warm weather. The early more dwarf varieties should be planted 2 by 3 feet apart, the larger and later kinds 4 by 5 feet apart in hills, 4 to 6 seeds in a hill. Our packets contain 2 full ounces.

Ioana New Midseason Hybrid Sweet Corn. An All-America Winner of 1940. The plant is strong and robust, producing an abundance of large ears (8 in. long) with 12-14 rows of sweet, tender, bright yellow kernels. It is one of the heaviest yielding varieties we know and is resistant to wilt (Stewart's Disease). In season it nicely follows Golden Cross Bantam, being ready in about 88 days. Earliest Carmine Erfurt or "Fire Ball" Radish

RADISH

Culture: For extra early use, seed may be sown in hotbed. For open ground culture, sow in spring as soon as ground can be worked, in rows not less than 1 foot apart, planting $\frac{1}{2}$ inch deep. Sow every 2 weeks for succession.

Alneer's New Fourteen-Day—This early Forcing Radish is of extremely quick growth, maturing in about two weeks under favorable conditions; the leaves are very short, which renders them particularly adapted for forcing under glass; they are of superior flavor, being crisp and tender, and in color they are a fresh, deep carmine red, very attractive. Pkt. 10c, oz. 20c, $\frac{1}{4}$ lb. 40c, $\frac{1}{2}$ lb. 70c, lb. \$1.25, 5 lbs. \$5.75, postpaid.

Saxa This is a European variety which has become very popular in the United States. It is one of the very earliest radishes and quite slow to run to seed. The tops are very small, the radishes are round and bright scarlet. We recommend it for first planting in the garden, and also for forcing in hotbed and greenhouse. Pkt. 8c, oz. 18c, $\frac{1}{4}$ lb. 35c, $\frac{1}{2}$ lb. 55c, lb. \$1.00, 5 lbs. \$4.50, postpaid.

Cooper's Sparkler This type of Radish, having red skin with a white tip, has long been a great favorite, and with this variety the white portion extends much farther up than is the case with ordinary Scarlet Turnip White Tip Radish. The upper portion is a rich, brilliant red, showing in great contrast to the lower portion, which is a pure white, and adding greatly to its attractive appearance. The general contour is turnip-shape, and size medium, very uniform, with flesh crisp, tender and sparkling. The rapidity of its growth recommends "New Sparkler" for growing in the greenhouse, but it is equally as valuable for sowing in the vegetable garden. Pkt. 8c, oz. 18c, $\frac{1}{4}$ lb. 35c, $\frac{1}{2}$ lb. 55c, lb. \$1.00, 5 lbs. \$4.50, postpaid.

Early Scarlet Globe It is the earliest, in color it is the handsomest, in flavor it is the mildest; crisp, most juicy and tender. It forms small top and will stand a great amount of heat without becoming pithy; is equally as good for early outdoor planting. Pkt. 8c, oz. 18c, $\frac{1}{4}$ lb. 35c, $\frac{1}{2}$ lb. 55c, lb. \$1.00, 5 lbs. \$4.50, postpaid.

It is very early notwithstanding its size. Color crimson, flesh pure white. Fine for outdoors and forcing. Pkt. 8c, oz. 18c, $\frac{1}{4}$ lb. 35c, $\frac{1}{2}$ lb. 55c, lb. \$1.00, 5 lbs. \$4.50, postpaid.

Victor

Victor 68 days. This new tomato which was bred by Dr. Yaeger at Michigan State College has the rare combination of fine points, extra early fruit, borne in great abundance, but so smooth, firm, solid and fine colored that it compares with the best later varieties in this respect. This variety ripens large clusters of fruit when the other extra early kinds have only one or two ripe fruits. The fruits are good size (average over 4 ½ oz.) light green when young, changing to a bright red all over, smooth and handsome and with no green spots. They are firm and solid and of excellent quality. Pkt. 15c, oz. 50c, ¼ lb. \$1.50, ½ lb. \$2.50, lb. \$4.80.

John Baer A remarkable new variety of the extra early red or scarlet type. Not as early as Earliana, yet there are only a few days' difference, and John Baer yields a much heavier crop of larger, more uniform and more attractive fruits that in total it makes a much more profitable crop to grow than any other extra early variety. Pkt. 10c, oz. 30c, ¼ lb. 90c, ½ lb. \$1.60, lb. \$3.00.

Pritchard or Scarlet Topper

As a result of the extensive experiments conducted by the U. S. Dept. of Agriculture in their quest for a perfect disease, wilt and rust resisting tomato, several fine varieties have been developed; but, it is believed that this, their newest introduction is the most perfect sort yet produced. An extra-early, large, smooth, and extremely solid Tomato of an intense scarlet color. Most productive and very attractive. Of a solidity that is truly remarkable, with very small seed pockets and no core. Its productiveness, particularly on rich soil, is amazing, and individual plants will bear 70 to 80 fruits each. It will yield 15 tons and more per acre. Pkt. 10c, oz. 30c, ¼ lb. 90c, ½ lb. \$1.60, lb. \$3.00.

Marglobe Tomato

Marglobe-Wilt Resistant A new variety that is attracting a lot of attention. Resists nail-head rust and fusarium wilt. Has proven successful under the most severe tests. Pure scarlet in color, globular in shape, extra large, smooth, early, beautiful in appearance and very productive. Above all, the quality is most excellent. Pkt. 10, oz. 30c, ¼ lb. 90c, ½ lb. \$1.60, lb. \$3.00.

The variety is not generally depended on for the root since the tops are produced so abundantly. Pkt. 5c, oz. 10c, $\frac{1}{4}$ lb. 25c, $\frac{1}{2}$ lb. 40c, lb. 75c.

Extra Early Purple Milan

White Globe or Snowball.

RELIABLE FIELD AND FARM SEEDS

Nothing is more important to the farmer than that the seed he sows is pure and clean. The seed should also be plump, and well ripened, so as to insure a good stand. First class, thoroughly cleaned seed, even though considerably more costly in the beginning, is really much cheaper in the end than the light chaffy grains generally sold at much lower prices, even if the latter is free from weed seeds.

Prices subject to change without notice, owing to the fluctuations of the market. Write for prices on large quantities.

HYBRID CORN

HYBRID CORN will yield from 10 to 30 per cent over ordinary varieties, this is due to practically every stalk producing a large, well developed ear, practically no barren stalks or nubbins.

HYBRID CORN has a wonderfully strong root system. It will stand up where ordinary varieties lodge. This feature alone is worth many times what it costs to plant Hybrid Corn; this corn is remarkably free from smut and root and ear rot.

HYBRID CORN grows strong and vigorous even in dry seasons. The stalks and leaves remain green until the ear is ripe.

Starting Seed Indoors

A month before you expect to set the started plants outdoors fill a flat wooden box one inch deep with coal ashes or small stones and cover that with an inch of finely sifted rich soil. Sow the seed thinly, cover about one-eighth of an inch and press firmly. Cover with a pane of glass and two thicknesses of newspaper to prevent too rapid evaporation. Keep in a temperature between 60° and 70° and water regularly and carefully. When the seeds have germinated remove the glass. When large enough to handle, transplant one inch apart in a similarly prepared box where they may be kept until time to set outdoors.

Starting Seed Outdoors

A fine seed bed is necessary and the seed should not be planted deeper than four times their size. Annual flowers grow from seed, bloom, and die in one year. Biennials bloom the second year and die. Perennials live on from year to year and generally do not bloom the same year the seed is planted.
